Art Unit: 1632

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-14, drawn to a method of preparing autologous T-lymphocytes by obtaining PBMC from a patient immunized with an antigen of the cancer, stimulating the PBMC with said antigen in vitro, and tranducing said PBMC with a retroviral vector expressing human IL-2, and a composition comprising said autologous T lymophocyte.

Group II, claim(s) 15 and 16, drawn to a method of treating a patient having cancer with said autologous T lymphocytes.

Group III, claim(s) 17-30, drawn to a method of preparing autologous Tumor-infiltrating-lymphocytes (TIL) by obtaining TIL from a patient immunized with an antigen of the cancer, and tranducing said TIL with a retroviral vector expressing human IL-2, and a composition comprising said autologous TIL.

Group IV, claim(s) 31 and 32, drawn to a method of treating a patient having cancer with said autologous TIL.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The "special technical feature" shared by groups I-IV is transduction of activated T lymphocyte or TIL with a retroviral vector expressing IL-2 protein. Lupton et al., 1999 (US Patent No. 5,874,556, IDS) teaches that "IL-2, for example, is a potent mitogen for cytotoxic T lymphocytes..., and the combination of antigen and IL-2 cause proliferation of primary CD8+ T cells in vitro." (e.g. column 1, lines 62-65), "cytotoxic T cells specific to a particular type of tumor can be isolated and administered to a patient having a

Art Unit: 1632

tumor, with the effect that the CTLs ameliorate the tumor.", and "T cells with apparent tumor specificity can be isolated from human tumors. Such human tumor infiltrating lymphocytes (TILs) have been expanded in vitro and used to treat cancer patients." (e.g. column 2, lines 7-19). Lupton further teaches introduction of a retroviral vector expressing stimulatory factor, such as IL-2, into an activated lymphocyte, such as CD8+ CTL, wherein expression of the IL-2 protein in lymphocyte can reduce dependency of the lymphocyte on T helper cells for proliferation (e.g. column 43, 44). Liu et al., 2001 (The Journal of Immunology, Vol. 167, p. 6356-6365, IDS) teaches retrovirally transducing melanoma-reactive human T lymphocytes with an exogenous human IL-2 gene and the transduced PBMC and cloned CD8+ T cells produced IL-2 and maintained viability after IL-2 withdrawal (e.g. abstract). Thus, no "special technical feature" has been contributed by the present invention over the prior art. Therefore, Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1632

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shin-Lin Chen whose telephone number is (571) 272-0726. The examiner can normally be reached on Monday to Friday from 9:30 am to 6 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Paras can be reached on (571) 272-4517. The fax phone number for this group is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.
